

Feed the Future FY24 Progress Snapshot

August 2025

FY2024 Feed the Future Key Results

More than **34 million people** participated in U.S. government supported food security programming.

The value of annual sales from farmers and firms supported by Feed the Future reached **\$5.1 billion**. This includes more than **\$2.3 billion** in sales by smallholder producers.

10.2 million producers applied improved agricultural practices on more than **5.1 million hectares** of cropland and cultivated pasture, including more than **2.1 million hectares** where climate adaptation or climate risk management practices or technologies were applied.

Farmers and firms accessed **\$1.2 billion** in agriculture-related financing. Since the start of Feed the Future in FY2011, the initiative has unlocked **\$8.9 billion** in financing for farmers, small business owners, and other program participants.

Feed the Future leveraged more than **\$710 million** in new private sector investment, more than double the level of investment seen in FY2020, just five years ago.

Introduction

Feed the Future (FTF) is a U.S. government initiative focused on tackling global poverty, hunger, and malnutrition through investments in agriculture-led economic growth, resilience, and improved diets. Historically, the initiative has been coordinated by USAID, reflected the efforts of twelve U.S. government agencies¹, and totaled roughly \$2 billion of investment each year.

These investments reached vulnerable households in more than 60 countries, with a particular focus on 20 “target” countries² selected based on a combination of need and opportunity. During the initiative's first decade, extreme poverty dropped by an average of 19 percent, hunger by 30 percent, and stunting among children under the age of five by 26 percent in the areas where Feed the Future focused its effort.

¹The U.S. Agency for International Development, U.S. Department of State, U.S. Department of Agriculture, U.S. Department of the Treasury, Millennium Challenge Corporation, U.S. Department of Commerce, U.S. International Development Finance Corporation, Peace Corps, U.S. African Development Foundation, U.S. Geological Service, the Inter-American Foundation and the Office of the U.S. Trade Representative.

² As of early 2025 FTF target countries included: Bangladesh, Democratic Republic of the Congo, Ethiopia, Ghana, Guatemala, Honduras, Kenya, Liberia, Madagascar, Malawi, Mali, Mozambique, Nepal, Niger, Nigeria, Rwanda, Senegal, Tanzania, Uganda, and Zambia

Feed the Future Reporting

Since its inception, Feed the Future has maintained a set of standard performance indicators to capture results of initiative programming at the output, outcome, and impact levels. These data are collected by implementing partners and entered into a central USAID database. While these metrics have been periodically reviewed and updated, the initiative has maintained consistent reporting since fiscal year (FY) 2011 on a series of key variables, including a count of smallholder farmers reached, hectares of land under improved practices or technologies, access to agriculture loans, and the value of agricultural sales, among others.

For nearly 15 years, Feed the Future has published a Progress Snapshot³ to highlight these activity-level data, including aggregated results achieved during the previous fiscal year from every FTF-funded activity⁴ implemented by USAID and reporting interagency partners⁵. This public-facing snapshot report has been complemented by the annual delivery of a more detailed Global Food Security Strategy (GFSS) Implementation Report to Congress, as mandated by the Global Food Security Act (GFSA)⁶.

FY2024 reporting

Typically, performance data submitted by implementing partners undergo a rigorous three step review process. First, program managers review the data submitted by the implementing partners they manage. Second, monitoring and evaluation advisors in the USAID Bureau of Resilience, Environment and Food Security's (REFS) Office of Country Implementation review the data and work with country-based partners to resolve any outstanding issues. Finally, staff from the USAID/REFS Analysis, Data, and Learning Team conduct a final review of the aggregated data. More detailed information on this review process can be found in Annex 2.

This year, the data review process was halted midstream following late-January stop-work orders for most USAID activities, the transition of most staff to administrative leave, and the subsequent elimination of USAID. This Progress Snapshot reflects an effort to document FY2024 Feed the Future results, despite these extenuating circumstances. However, a series of important caveats apply to these results.

- First, this snapshot only focuses on agriculture and food security-related indicators as nutrition-related metrics from FY2024 became inaccessible as of late January 2025.
- Second, given the interruption to data review and error correction, the review process has not been as rigorous as usual. Efforts have been made to leverage existing review notes, follow up on major issues, and identify outliers by comparing FY24 data with previous year's reporting.
- Third, not all FTF interagency partners were able to submit their data before network access was lost, thus the aggregate figures presented here do not represent the full breadth of the interagency FTF efforts in FY24.

As a result of these limitations, this report focuses on six key metrics, rather than the roughly one dozen that are usually included. In addition, the report focuses on aggregate results rather than country level information.

³ See last year's FTF Progress Report here:

<https://cg-281711fb-71ea-422c-b02c-ef79f539e9d2.s3.us-gov-west-1.amazonaws.com/uploads/2023/11/2023-Progress-Snapshot-Report-508c.pdf>

⁴ In this report, the words 'project' and 'activity' can be used interchangeably.

⁵ Of our 12 interagency partners, the ones who report annual results at the Activity and/or country-level are: U.S. Agency for International Development (USAID), the U.S. Department of Agriculture (USDA), U.S. Department of the Treasury, Millennium Challenge Corporation (MCC), Peace Corps, U.S. African Development Foundation (USADF), and the Inter-American Foundation (IAF)

⁶ [GFSA of 2016, reauthorized in 2022, see Sec. 5588](#)

FY2024 results

In recent years, Feed the Future has invested an average of \$2 billion per year through twelve USG partner agencies and departments. In FY2024, there were 543 active projects across 62 countries, with a focus on twenty FTF target countries, located primarily in sub-Saharan Africa (Figure 1). This report aggregates the results achieved during FY2024 by these activities for six standard indicators. Please see below for a summary of the aggregate initiative-wide Feed the Future results (Table 1), followed by additional details for each metric. For more details on the definition of each indicator and its connection to the Feed the Future Results Framework please refer to Annex 2.

Figure 1: Map of FY24 Feed the Future activities

Table 1: Recent Feed the Future results summary (in millions and billions of USD)

Indicator	FY2020	FY2021	FY2022	FY2023	FY2024
Number of individuals participating in USG food security programs [FTF indicator EG.3-2]	21.3 m	24.7 m	26.1 m	33.1 m	34.1 m
Value of annual sales of producers and firms receiving USG assistance [FTF indicator EG.3.2-26]	\$3.22 b	\$3.82 b	\$4.11 b	\$4.64 b	\$5.14 b
Number of individuals in the agriculture system who have applied improved management practices or technologies with U.S. Government (USG) assistance [FTF indicator EG.3.2-24]	7.8 m	7.7 m	6.2 m	9.6 m	10.7 m
Number of hectares of cropland or cultivated pasture under improved management practices or technologies with USG assistance [FTF indicator EG.3.2-25]	3.3 m	5.6 m	5.3 m	4.5 m	5.2 m
Value of agriculture-related financing accessed as a result of USG assistance [FTF indicator EG.3.2-27]	\$0.553 b	\$0.813 b	\$1.29 b	\$1.44 b	\$1.23 b
Value of new private sector investment leveraged by the USG to support food security and nutrition [FTF indicator EG.3.1-15]	\$285.1 m	\$476.5 m	\$695.1 m	\$677.4 m	\$710.5 m

Key Results by indicator

Number of individuals participating in USG food security programs (EG.3-2)

In FY2024, Feed the Future programming directly reached more than 34.1 million people, of which 42% were female. This reflects an increase of one million people compared to last year and an increase of more than 12 million people compared to FY2020 (Figure 3).

Note also that this figure does not include the number of children under five years of age reached with nutrition specific programming as these program participants are counted under a separate metric that was not accessible for FY24. In FY23, the last year for which data is available, USAID reached 28 million children under 5 with this type of programming.

Figure 2: The number of people participating in USG food security programs (EG.3-2)

Value of annual sales of producers and firms receiving USG assistance (EG.3.2-26)

Since the inception of Feed the Future, the initiative has tracked the value of agriculture-related sales generated by smallholder farmers participating in FTF activities. Since FY2018, this monitoring has also included the value of sales generated by other types of participants, including larger farmers and private sector firms, to better reflect the broader work of the initiative.

In FY2024, Feed the Future farms and firms generated over \$5.14 billion in sales, of which \$2.37 billion was generated by smallholder farmers. This aggregate result reflects a continuation of the increasing trend seen since FY2020 and a 10.5 percent increase from the \$4.65 billion in sales reported last year (FY2023). The value of sales generated by smallholder farmers in FY2024 (\$2.37 billion), has remained steady compared to the previous two years (\$2.28 billion in FY2023 and \$2.17 billion in FY2022); however, sales by larger farmers dropped by nearly 23 percent, falling from \$227 million in FY2023 to just over \$176 million in FY2024. Sales by firms increased by more than 21 percent compared to the previous year, with FY2024 sales coming in at just under \$2.6 billion, compared to just over \$2.1 billion in FY2023.

Over the life of the initiative (FY2011-FY2024), Feed the Future programming has enabled farms and firms to generate a total of over \$36.2 billion in agricultural sales, of which over \$24.6 billion was by smallholder farmers.

Figure 3: Value of sales in billions of USD by farms and firms receiving USG assistance (from EG.3.2-26)

Number of individuals in the agriculture system who have applied improved management practices or technologies with U.S. Government assistance (EG.3.2-24)

One key pathway through which Feed the Future aimed to increase agricultural productivity was through the promotion of improved practices and technologies including the use of improved seeds and fertilizers, improved irrigation practices, and improved crop pest management practices. During FY2024, the number of people in the agricultural system applying improved practices and technologies promoted by FTF programming rose to 10.7 million people, an 11 percent increase from the 9.6 million people who adopted improved practices/technologies in FY2023.

Of the 10.7 million people applying improved practices/technologies in FY2024⁷, over 10.2 million were producers. Roughly 40 percent of the producers reported were female, on trend with the two previous years (FY2022 and FY2023 results).

Figure 4: The number of individuals applying promoted practices/technologies (EG.3-2-24)

⁷ Besides smallholder and non-smallholder producers, the other types of people who can apply our promoted practices and technologies are: People in government, People in private sector firms, People in Civil Society, and Others.

Number of hectares under improved management practices or technologies with USG assistance (from EG.3.2-25)

In addition to monitoring the number of people who choose to apply FTF promoted practices, the hectares of land (or surface area of water) on which they are applied is also tracked. In FY2024, FTF programming reported over 5.1 million hectares of cropland and cultivated pasture under improved practices through our work, a 13 percent increase from 4.5 million hectares reported in FY2023 and roughly 9 percent higher than the FY2020-23 average.

Information on the type of promoted practice or technology being applied is also collected. For example, in FY2024 FTF activities reported that ‘climate adaptation/climate risk management’ practices or technologies had been applied to more than 2.1 million hectares. This could include adoption of drought- and flood-resistant crop varieties, adjustments to planting dates, crop diversification, agroforestry, integrated fisheries/agriculture systems, improving wild fisheries management to adapt to a changing climate, use of index insurance and other financing tools, use of weather and climate information, and adoption of risk-management practices, among others. This total reflects a decrease from the 2.8 million hectares under climate adaptive/climate risk management practices reported in FY2023 results, but remains similar to the recent three-year average of 2.4 million hectares.

Figure 5: Hectares of cultivated land under promoted practices/technologies (from EG.3.2-25)

Value of agriculture-related financing accessed as a result of USG assistance (EG.3.2-27)

Access to finance unlocks many opportunities for growth. Therefore, Feed the Future has long tracked the value of agriculture-related loans accessed by our program participants. Starting in FY2018, we expanded this monitoring to capture in-kind debt and non-debt⁸ (i.e. equity), recognizing the significant opportunities that financing beyond cash debt (loans) can provide to program participants.

Over the last 5 years, Feed the Future has unlocked financing for an average of 1 million people per year, with program participants accessing over \$1.2 billion in financing in FY2024. This year's total reflects a slight drop from the previous year (\$1.4 billion in value of financing accessed), but remains 20 percent above the FY2020-23 average of \$1.0 billion.

One example of FTF work in this area was the USAID-supported Feed the Future Ghana Mobilizing Finance in Agriculture (MFA) Activity, which connected "...women-led agribusinesses in the maize, soy, groundnut, cowpea, mango, cashew, shea, and other high-value export crop sectors to transaction advisors and financial institutions for support to access financing suited to their needs⁹". In many of these cases, USAID provided loan guarantees to the lender for these financial transactions in order to facilitate increased lending at reduced rates for these agribusinesses.

Since the inception of Feed the Future (FY2011-FY2024), initiative programming has unlocked \$8.9 billion in financing for farmers, small business owners, and other program participants.

Figure 6: Value of agriculture-related financing accessed in millions of USD (EG.3.2-27)

⁸ Non-debt includes any financing received other than cash loans and in-kind lending. Examples include equity; convertible debt; other equity-like investments, which can be made by local or international investors; and leasing, which may be extended by local banks or specialized leasing companies.

⁹ See press release from 2023 on this project here:

<https://gh.usembassy.gov/usaids-supported-feed-the-future-activity-connects-agribusinesses-to-investors/>

Value of new private sector investment leveraged by the USG to support food security and nutrition (EG.3.1-15)

Private sector investment is a critical component of food system transformation and an explicit area of focus for Feed the Future programming. In FY2024 Feed the Future leveraged more than \$710 million in new private sector investment to support food security and nutrition. The FY24 total represents a \$33 million increase over the previous year and an \$177 million increase compared to the recent four year average.

Note that the Feed the Future definition of “private sector investment leveraged” is quite strict. Only money that is actually disbursed by a private sector entity (not simply announced or promised) as a result of a monetary commitment by the USG (versus simply as a result of our convening power or partnership) is counted. This means that the totals reflected here are 1) reflective of actual investment 2) often smaller than other reports of private sector contributions which include pledges of future investment rather than actual contributions.

Figure 7: Value of new private sector investment in millions of USD (EG.3.1-15)

CONCLUSION

Feed the Future arose in response to the 2008 food price crisis with a vision to address global hunger, poverty, and malnutrition. For a decade and a half, Feed the Future has rooted its work in the potential for agriculture to drive inclusive and sustainable economic growth, the importance of strengthening resilience among people and systems to better weather shocks and stresses, and the promotion of diverse and affordable diets as the foundation of a well-nourished population.

Feed the Future has always prioritized rigorous monitoring and evaluation, both as a means of improving the quality of its programming and as an accountability mechanism. This has allowed the initiative to demonstrate transformative results. Feed the Future programs reached tens of millions of people each year, promoted successful new practices and technologies that increased agricultural yields and saved harvests from drought, unlocked capital to allow businesses to grow, increased access to safe and nutritious foods, and encouraged host governments to increase their investment in agriculture and nutrition outcomes. These impacts were not simply programmatic outputs such as increased attendance at farmer trainings or the distribution of improved seeds. They also reflected more fundamental improvements to agriculture, markets, and the broader food system which have led to measurable improvements in the wellbeing of local populations.^{10,11}

This report has highlighted key results from the initiatives most recent year (FY2024) in order to document the longstanding efforts of Feed the Future, efforts that have laid the groundwork for future investments in reducing global hunger, poverty, and malnutrition.

¹⁰ Analysis of population-based surveys conducted between FY2011- FY2019 indicate that extreme poverty dropped by an average of 19 percent, hunger decreased by 30 percent, and stunting among children under the age of five fell by 26 percent in the areas where Feed the Future focused its efforts.

¹¹ A 2021 portfolio-level impact evaluation conducted by IFPRI found that Feed the Future Phase 1 investments in Bangladesh were responsible for impressive, population-level improvements in food security, agricultural productivity, empowerment, and child diets, outcomes directly related to the country program's programmatic focus areas.

ANNEX 1 - Topline FTF Indicators by source, by year, and life of initiative totals

Table A1: FTF FY2024 results by source

Below are the key aggregated results from FY2024 (rounded) stratified by: (1) the 20 FTF Target Countries, (2) USAID's Bureau for Resilience, Environment and Food Security (REFS), and (3) All other FTF Countries.

Indicator	Target Country Totals	Bureau for REFS	All Other FtF Countries	FTF Total for FY24
Number of people reached with food security programming [EG.3-2]	14.8 m	11.5 m	7.7 m	34.1 m
Number of people applying improved management practices or technologies with USG assistance [EG.3.2-24]	3.4 m	5.9 m	1.3 m	10.7 m
Number of hectares of cropland, cultivated pasture, and/or aquaculture under improved management practices or technologies with USG assistance [from EG.3.2-25]	1.6 m	2.5 m	1.1 m	5.1 m
<i>of which are Climate Adaptation Hectares [portion of EG.3.2-25]</i>	794 k	1.1 m	311 k	2.2 m
Value of annual sales of producers and firms receiving USG assistance [EG.3.2-26]	\$3.2 b	\$855.1 m	\$1.1 b	\$5.1 b
Value of agriculture-related financing accessed as a result of USG assistance [EG.3.2-27]	\$497.4 m	\$239.1 m	\$498.3 m	\$1.2 b
Value of private sector investment leveraged by the USG to support food security and nutrition [EG.3.1-15]	\$505.3 m	\$64.2 m	\$140.9 m	\$710.5 m

Table A2: FTF initiative-wide results FY2018-FY2024

Below are the detailed results of Feed the Future since FY2018. For results from FY2011-2017, please see the accompanying chart with further explanatory notes.

Indicator / Disaggregation	FY2018	FY2019	FY2020	FY2021	FY2022	FY2023	FY2024
Number of individuals participating in USG food security programs [FTF indicator EG.3-2]			21,385,561	24,711,467	26,198,274	33,175,613	34,189,893

Number of hectares under improved management practices or technologies with USG assistance [FTF indicator EG.3.2-25]							

FY2024 Feed the Future Progress Snapshot

Indicator / Disaggregation	FY2018	FY2019	FY2020	FY2021	FY2022	FY2023	FY2024
# of which are intensively-managed hectares (i.e. cropland, cultivated pasture, and/or aquaculture)	8,462,148	6,254,203	3,404,719 ¹²	5,748,220	5,404,819	4,616,498	5,177,689
# of which are cropland or cultivated pasture	8,462,107	6,251,163	3,357,099	5,631,111	5,394,083	4,590,791	5,164,286
# of which are under 'climate adaptation / climate risk management practices or technologies'	1,399,041	829,407	1,245,643	1,994,876	2,433,035	2,878,124	2,193,627
# of which are extensively-managed hectares (i.e. rangeland, conservation/protected area, and/or freshwater or marine ecosystems)	2,235	12,383	480,770	826,751	949,252	931,258	4,227,688
Number of individuals who have received USG-supported degree-granting non-nutrition-related food security training [FTF indicator EG.3.2-2]	1,324	1,313	2,779	5,181	942 ¹³	6,014	Cannot report due to agency constraints
% Male	57.5%	54.4%	33.6%	40.8%	44.5%	66.1%	
% Female	42.4%	45.2%	66.1%	58.7%	34.0%	30.6%	
% DNA	0.1%	0.4%	0.3%	0.5%	21.5%	3.3%	
Number of individuals receiving nutrition-related professional training through USG-supported programs [standard foreign assistance indicator HL.9-4]	612,855	307,788	224,143 ¹⁴	236,291	163,745	256,054	Cannot report due to agency constraints
% Male	26%	24%	26%	35%	26%	39%	
% Female	69%	35%	46%	50%	48%	59%	

¹² The drop in this indicator compared to FY2019 was almost completely due to the Nigeria Mission's buy-in to the PIATA activity (#103266: Partnership for Inclusive Agricultural Transformation in Africa (PIATA) Activity - [Nigeria Buy-in]; DIS ID# 1421), which reported nearly 2.5 million hectares in FY2019, but was unable to collect their FY2020 results due to COVID restrictions. This is an example of where results may have been on par with the previous year, but pandemic restrictions preventing data collection meant we had unknown results.

¹³ Decline by about 4,000 largely due to two RFS-managed activities, both of which closed or began to wrap up between FY 2021 and FY 2022.

¹⁴ Aggregate HL.9-4 results decreased in FY20 due to impacts from COVID-19 that resulted in programming shifts and/or delays in conducting nutrition-related trainings across a number of USAID Operating Units.

Per capita financing to females per dollar of financing to males			\$0.87	\$0.90	\$0.47 ¹⁵	\$0.38	<i>Cannot report due to agency constraints</i>
Value of new private sector investment leveraged by the USG to support food security and nutrition [FTF indicator EG.3.1-15]	\$234,489,309	\$429,928,136	\$285,118,725 ¹⁶	\$476,580,627	\$695,186,989	\$677,471,554	\$710,509,864

¹⁵ Note that this gender gap in finance calculation does not include reporting from Activity #2339 Feed the Future Nigeria Agricultural Extension and Advisory Services, due to data quality concerns.

¹⁶ The decrease in this indicator is largely due to the closing out and winding down of two USDA Food for Progress regional programs in Kenya and Tanzania that had contributed over \$165 million towards this indicator result in FY2019.

Table A3: FTF life-of-initiative results FY2011-FY2024 (where applicable)

Indicator / Disaggregation	FY2011-2024
Value of annual sales of producers and firms receiving USG assistance ¹⁷	\$36.2 billion
\$ of which are from smallholder producers	\$24.6 billion
\$ of which are from non-smallholder producers	\$3.1 billion
\$ of which are from firms	\$10.4 billion
Value of agriculture-related financing accessed as a result of USG assistance ¹⁸	\$8.9 billion
\$ of which is cash debt	\$8.1 billion
Value of new private sector investment leveraged by the USG to support food security and nutrition ¹⁹	\$4.7 billion

¹⁷ This life-of-initiative (LOI) total may be underestimated because it does not include any sales from non-smallholder producers or firms for the years FY11-17, as we only started collecting sales from those actors in FY18 and FY19.

¹⁸ This LOI total may be underestimated because it does not include any in-kind debt or non-debt (equity) financing for the years FY11-17, as we only started collecting those additional types of financing in FY18 and FY19.

¹⁹ This LOI total may be underestimated because it does not include operating capital investments for the years FY11-17, as we only started collecting that additional type of private sector investment in FY18 and FY19.

ANNEX 2 - Methods & Background

Data collection and review

Each year, performance monitoring data from Feed the Future activities and projects go through a robust collection, review, and analysis process to ensure high quality, comprehensive reporting. In FY2024 alone, Feed the Future programmed over 540 activities across our 12 interagency partners, so adherence to standard indicators and processes is imperative for proper initiative reporting.

This process begins with each Feed the Future project/activity developing a monitoring, evaluation, and learning (MEL) plan that includes both custom and standard qualitative and quantitative reporting. Feed the Future activities must select and report on all of the relevant activity-level standard performance indicators from the FTF Indicator Handbook²⁰. Consistent and validated data collection then proceeds throughout project/activity implementation.

Once data is collected, USAID Implementing Partners (IPs) internally review and correct their performance data before reporting quarterly and/or annually into USAID's agency-wide, online performance management database named the Development Information Solution (DIS)²¹ (in October-December each year). Once submitted, the data is first reviewed by the activity's Agreement Officer's Representative (AOR) or Contracting Officer's Representative (COR) and the MEL leads at their respective Operating Units (OUs)/USAID Missions to ensure accuracy and proper interpretation. Next the data is shared with the OU's assigned MEL Technical Advisor (MEL TA) in USAID's Bureau for REFS, for line by line review (January-April). MEL TAs thoroughly review the reported values, engage the USAID OU/Missions and IPs for any data clarifications or questions, correct any errors, and provide guidance on proper interpretation of metrics.

Feed the Future interagency partners conduct their own internal review and submission to USAID on an annual basis, as outlined in agreements between the agencies involved in the Global Food Security Act (GFSA).

Finally, following the data generation and review process outlined above, results are submitted to the USAID/REFS Analysis, Data and Learning Division for final review and initiative-level aggregation (May-June). The aggregate initiative results are then published annually to Congress, as mandated by the GFSA, as well as to the public, through the annual Progress Snapshots. This rigorous process ensures that Feed the Future data are comprehensive, high quality and provide important accountability to the American taxpayer for achieving intended results.

See below for a depiction of the stakeholders and processes involved in the Feed the Future reporting process each year.

²⁰ Handbook available here: [Feed the Future Indicator Handbook 2023 FINAL_508 Compress adobe.pdf](#) with Addendum highlighting updates made in FY2024 here: [_Addendum to the FTF Handbook_ List of standard FTF Indicators FY24 update_20240918.docx](#)

²¹ FTF interagency partners who report performance monitoring results only enter data annually into DIS.

Figure A1: Steps and stakeholder of the Feed the Future Reporting Process

Indicator deep dives

Feed the Future utilizes 60 standard metrics at various levels of measurement, as described in the [FTF Indicator Handbook](#). Here we provide additional background on the six metrics included in this progress snapshot. These six indicators speak to key aspects of Feed the Future work and connect to the initiative's results framework, as the descriptions below explain:

1. [Number of individuals participating in USG food security programs \[FTF indicator EG.3-2\]](#)
 - This is an output indicator measuring a headcount of persons reached by our programming. We count all people with significant interaction with our activities as direct participants. This indicator is broken down by sex, age, and type of individual (e.g., producer, private sector employee, school age child).
 - Understanding who we are reaching with food security programming is a core piece of monitoring information that contributes to more effective and efficient programming.
 - This indicator is an output indicator and is linked to many parts of the GFSS Results Framework.
2. [Number of individuals in the agriculture system who have applied improved management practices or technologies with U.S. Government \(USG\) assistance \[FTF indicator EG.3.2-24\]](#)
 - This is an outcome indicator that captures the count of people who have chosen to apply improved practices and technologies promoted by Feed the Future anywhere within the agriculture and food system. The practices include soil-related fertility and conservation, water resources management, improved crop genetics, value-added processing, and

post-harvest handling and storage, among others. This indicator is broken down by value-chain actor type (smallholder producer, non-smallholder, etc.), as well as sex, age, type of practice applied, and crop on which it was applied (if applicable).

- Improved management practices and technological change and adoption by different actors throughout the agricultural system is critical to increasing agricultural productivity and supporting stronger and better functioning systems.
- This indicator falls under IR 1: Strengthened inclusive agriculture systems that are productive and profitable in the GFSS Results Framework.

3. Number of hectares under improved management practices or technologies with USG assistance [FTF indicator EG.3.2-25]

- This is a ‘sister indicator’ to the one described above, which reflects land area (in hectares) on which the improved management practices/technologies are applied. This indicator is broken down by type of land/water where practices are applied, as well as sex and age of the land/water owner/manager, the type of practice, and the crop (if applicable).
- Improved management practices on agriculture land, in aquaculture, and in freshwater and marine fisheries are critical to increasing agricultural productivity. This indicator tracks successful application of technologies and management practices in an effort to improve agricultural productivity, agricultural water productivity, sustainability, and resilience to climate change.
- In the GFSS Results Framework, this indicator reports contributions to IR 4: Increased sustainable productivity.

4. Value of annual sales of producers and firms receiving USG assistance [FTF indicator EG.3.2-26]

- This is an outcome indicator capturing the value of annual agricultural sales generated by farmers and firms supported by Feed the Future programming. The value of agricultural sales by smallholder farmers has been monitored since the initiative’s inception. More recently, the initiative has also begun tracking sales from larger producers and private sector firms.
- The value of sales from assisted producers and firms in targeted markets is a measure of the competitiveness of those actors. This measurement also helps track strengthened and expanded access to markets and progress toward farmers and firm engagement throughout the value chain.
- This indicator relates to IR 2: Strengthened and expanded access to markets and trade in the GFSS Results Framework.

5. Value of agriculture-related financing accessed as a result of USG assistance [FTF indicator EG.3.2-27]

- This is an outcome level indicator that measures the value of agriculture-related financing accessed by FTF program participants, such as cash loans, in-kind debt, and non-debt. This indicator does not refer to grants distributed by the USG, but rather financing made available through Feed the Future efforts, such as backing a loan guarantee to reduce a bank’s risk in lending or providing technical assistance to a small business to improve their loan application. This indicator is disaggregated by sex of the recipient, as well as size (if a firm is the recipient of the financing).

- Increased access to finance demonstrates improved inclusion in the financial sector and appropriate financial service offerings. This, in turn, will help to strengthen and expand access to markets and trade, IR 2 of the GFSS Results Framework. This indicator is also linked to IR 3: Increased employment and entrepreneurship)

6. Value of new private sector investment leveraged by the USG to support food security and nutrition [FTF indicator EG.3.1-15]

- This is an outcome indicator that measures various ways Feed the Future leveraged new private sector investment including both long-term capital investments (e.g., property, plant, equipment, and other fixed assets) and new operating or working capital (e.g., inputs or inventory).
- Increased investment is the predominant source of economic growth in the agricultural and other economic sectors. Private sector investment is critical because it indicates that the investment is perceived by private agents to provide a positive financial return and, therefore, is likely to lead to sustainable improvements in agricultural market systems.
- This indicator is linked to CCIR 1: Strengthened global commitment to investing in food security in the GFSS Results Framework.

FY2011-FY2024 OFFICIAL FTF Annual Aggregate Results
for the 2024 Progress Snapshot
as of August 6, 2025

Indicator / Disaggregation	FY2011	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	FY2018	FY2019	FY2020	FY2021	FY2022	FY2023	FY2024
	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual

Number of hectares under improved management practices or technologies with USG assistance [FTF indicator EG.3.2-25]														
# of which are intensively-managed hectares (i.e. cropland, cultivated pasture, and/or aquaculture) (b)								8,462,148	6,254,203	3,404,719 ¹	5,748,220	5,404,819	4,616,498	5,177,689
# of which are cropland or cultivated pasture (c)	1,869,164	3,452,459	3,851,676	2,662,477	5,164,319	6,362,260	7,536,027	8,462,107	6,251,163	3,357,099	5,631,111	5,394,083	4,590,791	5,164,286
# of which are under 'climate adaptation / climate risk management practices or technologies' (d)						669,018	1,691,768	1,399,041	829,407	1,245,643	1,994,876	2,433,035	2,878,124	2,193,627
# of which are extensively-managed hectares (i.e. rangeland, conservation/protected area, and/or freshwater or marine ecosystems) (e)								2,235	12,383	480,770	826,751	949,252	931,258	4,227,688

¹ The drop in this indicator compared to FY2019 was almost completely due to the Nigeria Mission’s buy-in to the PIATA activity (#103266: Partnership for Inclusive Agricultural Transformation in Africa (PIATA) Activity - [Nigeria Buy-in]; DIS ID# 1421), which reported nearly 2.5 million hectares in FY2019, but was unable to collect their FY2020 results due to COVID restrictions. This is an example of where results may have been on par with the previous year, but pandemic restrictions preventing data collection meant we had unknown results.

Indicator / Disaggregation	FY2011	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	FY2018	FY2019	FY2020	FY2021	FY2022	FY2023	FY2024

Number of pregnant women reached with nutrition-specific interventions through USG-supported programs [standard foreign assistance indicator HL.9-3] (i)						960,323	5,258,972	8,264,647	8,551,790	8,654,094	10,078,872	11,648,170	11,489,088	Cannot report due to agency constraints
% Adolescent (<19 years old)						not cd	2%	6%	5%	10%	15%	8%	9%	
Value of annual sales of producers and firms receiving USG assistance [FTF indicator EG.3.2-26] (j)								\$1,683,248,588	\$3,051,692,687	\$3,227,403,119	\$3,828,995,349	\$4,110,472,211	\$4,648,679,996	\$5,143,390,628
\$ of which are from smallholder producers (k)	\$53,465,273	\$352,962,159	\$1,241,277,808	\$1,568,791,560	\$2,286,217,102	\$2,408,065,134	\$2,658,952,465	\$1,625,768,965	\$1,508,227,031	\$1,583,269,789	\$2,529,768,915	\$2,174,869,605	\$2,283,270,770	\$2,373,005,743
\$ of which are from non-smallholder producers (l)								\$5,280,227	\$18,253,145	\$339,400,512	\$244,962,746	\$171,368,293	\$227,887,971	\$176,693,775

² Decline by about 4,000 largely due to two RFS-managed activities, both of which closed or began to wrap up between FY 2021 and FY 2022.

³ Aggregate HL.9-4 results decreased in FY20 due to impacts from COVID-19 that resulted in programming shifts and/or delays in conducting nutrition-related trainings across a number of USAID Operating Units.

Indicator / Disaggregation	FY2011	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	FY2018	FY2019	FY2020	FY2021	FY2022	FY2023	FY2024
	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual
\$ of which are from firms (m)								\$52,199,396	\$1,525,212,511	\$1,304,732,818	\$1,054,263,688	\$1,764,234,312	\$2,137,521,255	\$2,593,691,110
Value of agriculture-related financing accessed as a result of USG assistance [FTF indicator EG.3.2-27] (n, o)								\$429,134,970	\$486,177,115	\$553,054,132	\$813,723,915	\$1,299,563,679	\$1,446,055,688	\$1,234,949,223

Per capita financing to females per dollar of financing to males (q)										\$0.87	\$0.90	\$0.47 ⁴	\$0.38	Cannot report due to agency constraints
Value of new private sector investment leveraged by the USG to support food security and nutrition [FTF indicator EG.3.1-15] (r)								\$234,489,309	\$429,928,136	\$285,118,725 ⁵	\$476,580,627	\$695,186,989	\$677,471,554	\$710,509,864

⁴ Note that this gender gap in finance calculation does not include reporting from Activity #2339 Feed the Future Nigeria Agricultural Extension and Advisory Services, due to data quality concerns.

⁵ The decrease in this indicator is largely due to the closing out and winding down of two USDA Food for Progress regional programs in Kenya and Tanzania that had contributed over \$165 million towards this indicator result in FY2019.

CHART NOTES

1. Feed the Future has a set of standard indicators with definitions published in the [FTF Indicator Handbook](#) (most recent version is November 2023, with [Addendum](#) showing updates made in FY2024). These performance-management indicators are designed to measure progress against each result in the Feed the Future results framework during Phase Two of the initiative.
2. Fiscal Year (FY) 2018 and FY 2019 represent the two years of transition for results, meaning during those years, some projects were reporting on old indicators while others report on updated indicators. Therefore, some values are likely underestimates. This chart combines these data where appropriate. See the footnotes for details. For the results in FY 2020 and beyond, all projects reported only on the new set of indicators.
3. U.S. Government departments and agencies that contributed results to these totals include the U.S. Agency for International Development (USAID), U.S. Department of Agriculture (USDA), Millennium Challenge Corporation (MCC), Peace Corps, U.S. African Development Foundation (USADF), the Inter-American Foundation (IAF), and the U.S. Department of the Treasury (via their contributions to the International Fund for Agricultural Development (IFAD) and the Global Agriculture and Food Security Program (GAFSP), which are independent institutions whose objectives align with FTF goals. Note that the FY2024 results do not include all interagency contributions as they became inaccessible as of late January 2025. Therefore, the aggregate results may be an underestimate.
4. The data for output and outcome indicators above reflect results achieved among direct participants of U.S. Government (USG) projects, and are directly attributable, as explained below, to USG funding. For the purposes of this report, a result is attributable to the USG or the USG can claim credit for a result, even when other partners are involved in achieving the result, if they can claim that without USG intervention the outcome would not have taken place. Note that while USG contributions to IFAD and GAFSP support work aligned with FTF goals, the USG is not directive in the specific programming of these institutions. No IFAD and GAFSP data are included in the FY2024 results.
5. Our annual data collection shows that in aggregate, Feed the Future results in FY2020 and FY2021 remained on par with those from FY2019, suggesting that COVID did not have a significant impact on activities. However, analysis of the data showed a more nuanced picture that included both favorable gains in results from activities shifting and concentrating focus in a new area and loss of progress from program stoppage or unknown results from restrictions in data collection. Review of qualitative Feed the Future data found situations and responses varied country to country from the severity of the infection rate to host governments’ responses. Feed the Future programs responded quickly with a range of approaches that included: adopting digital methods for conducting business, pivoting to a concentrated focus on areas most vulnerable to the pandemic, and reprogramming activities by expanding or altering services.

FOOTNOTES

- a. This value includes results reported under the old indicator EG.3.2-17 and the current indicator EG.3.2-24. Results could underestimate the number of “non-producers” that applied as the new indicator captures a broader set of actors beyond the farm, while the old indicator did not.
- b. This value includes results reported under the old indicator EG.3.2-18 and the current indicator EG.3.2-25. Results could be underestimated, because the old indicator did not include aquaculture hectares while the new indicator does.
- c. This value includes all hectares reported under the old indicator EG.3.2-18 and results from the “cropland” and “cultivated pasture” disaggregate under the current indicator EG.3.2-25.
- d. Hectares under ‘climate adaptation / climate risk management practices or technologies’ were not collected as a separate category prior to FY 2016.
- e. This value only reflects results from the current indicator EG.3.2-25.
- f. This result includes some USAID activities beyond those funded by Feed the Future. This number represents the aggregate of country-wide results from nutrition interventions delivered through Feed the Future (which includes USAID Bureau for Humanitarian Assistance development investments), and USAID Global Health nutrition programs as part of a multi-sectoral effort to combat malnutrition. Note that nutrition-related metrics from FY2024 became inaccessible as of late January 2025, and therefore are not included in the FY2024 results displayed here.
- g. This result includes some USAID activities beyond those funded by Feed the Future. This number represents the aggregate of country-wide results from nutrition interventions delivered through Feed the Future, USAID Bureau for Humanitarian Assistance development investments and USAID Global Health nutrition programs as part of a multi-sectoral effort to combat malnutrition. Individual USAID projects are instructed to count children only once even if they are reached several times. Starting in FY 2017, this revised indicator has captured nutrition-specific interventions only.
- h. This result includes some USAID activities beyond those funded by Feed the Future. This number represents the aggregate of country-wide results from nutrition interventions delivered through Feed the Future, USAID Bureau for Humanitarian Assistance development investments and USAID Global Health nutrition programs as part of a multi-sectoral effort to combat malnutrition. Individual USAID projects are instructed to count children only once even if they are reached several times.
- i. This result includes some USAID activities beyond those funded by Feed the Future. This number represents the aggregate of country-wide results from nutrition interventions delivered through Feed the Future, USAID Bureau for Humanitarian Assistance development investments and USAID Global Health nutrition programs as part of a multi-sectoral effort to combat malnutrition. Individual USAID projects are instructed to count women only once even if they are reached several times. Age disaggregation was not collected until 2017.
- j. This value includes reporting-year sales reported under the old indicator EG.3.2-19 and the current indicator EG.3.2-26. Results may be underestimated because the old indicator did not include sales from non-smallholder producers and firms while the new indicator does.
- k. These results include reporting-year sales reported under the old indicator EG.3.2-19 and those reported for the “producer: smallholder” disaggregate with the current indicator EG.3.2-26.

- l. Results could be underestimated in FY2018 and FY2019, as projects that still reported on the old indicator did not report sales from non-smallholder farmers. This value only reflects results from the current indicator EG.3.2-26.
- m. Results could be underestimated, as projects that are still reporting on the old indicator do not include sales from firms. This value only reflects results from the current indicator EG.3.2-26.
- n. This total includes reporting from the old indicator on agricultural and rural loans EG.3.2-6 and the current indicator EG.3.2-27. Results may be underestimated because the old indicator does not include non-cash debt (i.e., in-kind debt) and non-debt financing while the current indicator does.
- o. Sex-disaggregation for this indicator will not be available at this time because of a change in the definition of the indicator to remove shared ownership from the female disaggregate, and we have more years of reporting.
- p. Results include the value of loans reported under the old indicator EG.3.2-6 and the value of “cash debt” reported under the current indicator EG.3.2-27.
- q. These data are calculated from the subset of results that have reported both a ‘value (USD)’ of financing accessed for females and/or males with a corresponding ‘number of recipients’ of that financing who are female or male, i.e. these data are from ‘matched pairs’ only. Note that some FTF Activities do not report sex disaggregated data for the value of financing accessed and/or the number of financing recipients, and those results are not included in these gender gap calculations since a ‘gender gap’ cannot be calculated without the sex disaggregated data. This is a performance indicator for the FY 2022 - 2023 Resilience and Food Security APG, as well as for the FTF initiative in general. The initiative is ‘Not On Track’ for this performance target as further detailed in this [Annex on the FTF Performance Targets](#) included as part of the Global Food Security Strategy (GFSS) Implementation Report sent to Congress each year. In many cases, the average value of financing accessed by men continued to outpace that accessed by women. Note that while the FY 2023 value was Not on track, the Initiative plans to have a substantial increase in the next year. Such an increase would make the Initiative ‘On track’. Further note that data for the gender parity in finance calculation became inaccessible as of late January 2025, and is therefore not able to be calculated for FY2024 results.
- r. Results include the value of private-sector capital investment reported under the old indicator EG.3.2-22, private-sector investment reported under the old indicator EG.3.1-14 and private-sector investment reported under current indicator EG.3.1-15. Results may be underestimated because the old indicator did not include operating capital investment amounts while the new indicator does.
